Welcome to takana

We sell native trees...at big tree stage!

takana grows almost every New Zealand native tree, at heights of 2m-5m in 45 Litre carry bags or bigger, up to 450 Litres, plus field trees.

So, more than 75 species of beautiful native trees at big tree stage to enhance your landscape spaces, because...if you need instant impact, life's too short to wait for small plants to become specimen trees.

takana has a policy of stocking all the native trees which will grow in the North (i.e. from Waikato/Bay of Plenty north).

takana grows more than 75 species, as well as intra-species variations. Half of these species are not commonly available from NZ nurserymen, but all have their own beauty and place within our unique ecology. And surprisingly, many of us have little or no knowledge of these – how they grow and what conditions they suit.

FAQ's - Tree selection & cultivation

How do I know which native trees I want?

First look at the data in the Tab "Find Your Tree", then click on the name of the tree, or click on 'View All Trees' and you will get more data plus photos—trees suitable for every situation NZ can offer.

What if I get them and they die?

Knowing the effort our customers make in their sourcing and planting, we are happy to replace trees which have died. And trees do die sometimes. So we replace them or suggest alternatives subject to availability. There are handy tips for planting and caring for trees on our website.

Are natives slow?

Of course some are slow, but most of them are strong growers, and some are fast by any standards. so don't be under the illusion that natives take forever to make a show. BUT, plant a native and you could be responsible for a living thing that will last for a thousand years. Imagine that!

Do natives transplant well, especially at bigger stages?

Yes they do. There are many big tree nurseries like us which supply natives. Our replant experience is overwhelmingly successful, and your takana tree is guaranteed for replacement anyway.

Why are the names so hard?

We agree, but a bit hard to pinpoint the answer. takana uses Maori names wherever we can establish the correct Maori word. We don't use the old (cringeworthy) English names like Celery Pine, Whiteywood and others we should not even quote in a family website. But the Maori names are not used nationwide, so there can be confusion. The trade relies on the Botanical names, which are of course long and latin, and even these keep changing as new requests are accepted by the powers that be. Some like Tawapou (*Planchonella costata*) have two latin names in common use. Some have no Maori name, mostly the rarer species, so we either choose a part of the latin name, like Baylisiana (*Pennantia baylisiana*) or Elingamita (*Elingamita johnsonii*), or the English name like Coastal Maire (*Nestegis apetala*) or Silver Pine (*Manoao colensoi*).

How do you move your field trees when you sell them?

We dig them with either of our two tree spades, (hydraulic operation, mounted on a digger), then we wrap them in hessian, mount them in a wheeled, palletised frame for transport in our tall trailer. On arrival you take the tree out of the frame and place it directly into the hole, where the hessian remains holding the root ball together while the tree settles into its new home. We have a very high success rate, with a relatively low cost system.

Why do you wish to stock so many trees?

Surely some are too rare to be commercial? Yes, but we are helping to preserve some threatened species, and though those are usually the slow growing ones, they are beautiful and will have a place if we can just showcase them to our customers. 4 of our trees were saved by scientists who discovered one single example.
